Dr. Lily Talakoub who is the founder and owner of McLean Dermatology and Skincare Center has expanded her practice with a second location located in Potomac, Maryland! Opening a second location in Potomac was an easy decision for Dr. Lily and her team; "We treat many patients around the DMV but especially, in Maryland. It was important to us to expand into a location where we could accommodate some of our most loyal patients seeking dermatological care." Dr. Lily and her team of Skin Experts are passionate about creating a solution and Potomac Village was the perfect place to do just that.

Dr. Lily Talakoub who is a Top-Board Certified Dermatologist is an expert in the diagnosis and treatment of all adult

and pediatric skin disorders, skin cancer surgery, and cosmetic dermatology. Dr. Talakoub is sought out for her ability to make tasteful improvements; her understanding of facial symmetry aligns with her belief that subtle enhancements are much more beautiful than dramatic modifications.

As passionate as Dr. Lily is about her work, she is devoted to caring for patients in McLean and Potomac! Though the majority of Skin Experts will remain in McLean, Dr. Lily will be joined in Potomac by her colleague and accomplished Board-Certified Dermatologist, Dr. Amanda Lezanski. Dr. Lezanski is not only a highly trained dermatologist that treats all skin conditions including pediatrics, adults, and cosmetics, and is skilled in skin

cancer surgeries, but she is also a dynamic leader and educator in dermatology. She has been praised for her surgical skills, compassion, dedication to patient care, and holistic approach to diagnosing and treating dermatologic conditions in patients of all ages.

Potomac Dermatology and Skin Care Center's expert dermatologists Dr. Lily Talakoub and Dr. Amanda Lezanski believes in providing premier quality care in a safe and friendly environment. The Skin Experts of Potomac specialize in a full range of medical and surgical dermatologic care including pediatrics, cosmetics, botox, fillers, lasers, and skin rejuvenation services using state-of-the-art techniques. This includes skin checks, mole and skin lesion evaluation, and surgical excision for skin cancers.
